REPORT OF BRAIN STORMING SESSION

2023-24

Brainstorming is an interactive group process for generating many ideas rapidly in order to discover creative and unobvious solutions to a challenging problem. The key to success is to encourage the free flow of ideas—without inhibition. It's a classic process mistake to explore only one design idea. A brain storming session for B.Ed. students was conducted on 23rd April, 2024 on the topic "Impact of Education on Society". The resource person of the session was Dr. Geeta Kundi. Brainstorming method was used to address various issues like role of education to uplift society. Students of B.Ed. class discussed how education enriches the knowledge, skills and personality of individuals. Through education every human tries to get employment opportunities and increase the progress of country. Many students also expressed that education teaches us to live independently, by helping us to express our own views and opinions with the basic value and skill in life.

Brainstorming session can encourage learners to think more freely and innovatively than if they were doing a more restricted and routine classroom situation. It allows learners to remember what they know, and to teach each other. It is a dynamic and stimulating way to lead learners into a topic. As there are no wrong and right answers, the sessions provided students with a platform where they can voice their thoughts without fear of failure. It also encouraged them to listen and consider others' ideas, thereby showing respect for their fellow classmates. A total of 34 students from B.Ed. class participated in the brainstorming session.
